Outline

Mathematical content

A content-heavy slide

Bibliography

A theorem-like slide

Theorem (Sample theorem)

Let X be a sample object. Then X satisfies a property visible in a Beamer theorem block.

Proof.

The proof is displayed using the template's mathematical font setup. For example,

$$(a+b)^2 = a^2 + 2ab + b^2.$$

□

⚠ Add more details to the proof.

Lists and displayed mathematics

The template should handle ordinary mathematical slides with lists.

- First item, with inline mathematics $f\colon X \to Y$.
- Second item, referring to the displayed equation below.
- Third item, with a citation [Har77].

$$\chi(\mathcal{F}) = \sum_i (-1)^i h^i(X, \mathcal{F}).$$

A denser slide

This slide is intentionally more text-heavy. It is meant to test line breaks, mathematical notation, lists, and the visual density of the theme.

1. The first point contains a short mathematical statement.
2. The second point includes a displayed formula:

$$0 \to \mathcal{F}' \to \mathcal{F} \to \mathcal{F}'' \to 0.$$

3. The third point checks that the slide remains readable.
