Example report document

Lecture notes

Example Author

2nd November 2026

These are lecture notes for an undergraduate course on lattice theory.

Course information

Undergraduate course on lattice theory, Example University.
Academic year 2026–2027.

Status of these notes

This is a working document. Corrections and suggestions are welcome.

1.1 Structured statements 1
1.2 Diagrams and ordinary lists 1

2 Another Chapter **3**
2.1 Resetting theorem numbers 3

Chapter 1

A Sample Chapter

1.1 Structured statements

Definition 1.1.1. A *longform object* is an object X equipped with a map

$$\alpha_X \colon X \to G(X)$$

satisfying the following properties.

(a) The object X exists in the category under consideration.

(b) It is unique up to unique isomorphism.

Proposition 1.1.2. *Every longform object is determined by the data in Items 1.1.1(a) and 1.1.1(b).*

Proof. This is a template proof. The point is that the item references are attached to the theorem-like environment Theorem 1.1.1, so their labels are numbered using the surrounding theorem number. □

Remark 1.1.3. Long-form documents often contain many references. This example cites Hartshorne [Har77] and the Stacks Project [SP].

1.2 Diagrams and ordinary lists

The template supports commutative diagrams. For instance, one may write

$$\begin{array}{ccc} A & \xrightarrow{\phi} & B \\ {\scriptstyle\alpha}\downarrow & & \downarrow{\scriptstyle\beta} \\ C & \xrightarrow[\psi]{} & D. \end{array}$$

Such diagrams are useful in lecture notes and book-length projects.

The template also supports ordinary enumerated lists:

(a) A first ordinary item.

(b) A second ordinary item.

We can refer to Item (b) as an ordinary item, and to Item 1.1.1(b) as a theorem-numbered item.

Chapter 2

Another Chapter

2.1 Resetting theorem numbers

This chapter checks that theorem-like numbering behaves correctly after a chapter change. ⚠ Here is a to-do note.

Lemma 2.1.1. *The references from the first chapter, such as Theorem 1.1.1, still work from later chapters.*

Proof. This proof is only illustrative. It also demonstrates a displayed equation:

$$(f \circ g)^* = g^* \circ f^*. \tag{2.1.1}$$

□

Alice: We should add an example here.

Example 2.1.2. A long-form document may also contain external links, for instance to the biblatex package page.

Bob: I've added the example above.
